

Mount Sinai Rehabilitation Center

2020 Scorecard Amputation Specialty Program

Furthering ability through clinical care, science, education and innovation

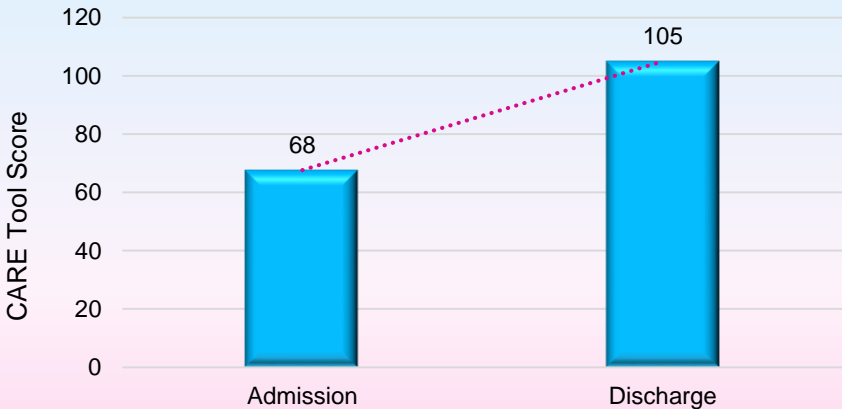

Patients Served: 7

Average Age: 51 years old

Average Length of Stay: 14.7 days

Functional Improvement

The effectiveness of rehabilitation care is measured by improvement in functional status. This quality measure demonstrates the change in scores for self-care and mobility from admission to discharge. Our patients make significant gains in function and independence during their stay.

Intensity of Therapy

On average, our patients receive 3.2 hours of therapy per day, including Physical and Occupational Therapy, Speech Language Pathology and Neuropsychology. Supplemental activities are offered daily by our Therapeutic Recreational Specialists.

Discharge

The majority of our patients are discharged back to the community following inpatient rehabilitation. Some patients (43%) require transfer to the acute hospital for further medical management.

Prosthetic Use

100% of patients discharged from our Center have been fitted for a prosthesis. 100% are using the prosthesis for walking.

Patient Satisfaction

100% of patients are satisfied with the Amputation Specialty Program
